Orlov Arms International · simplified balance sheet

As of 18 October 2026, 17:30 EVE time. Figures read live from EVE (ESI) through auth. All amounts in millions of ISK. Prepared for the directors of The Orlov Family.

1. Position against the 5 B baseline

On 18 October the corporation's money was separated from the owner's. The corporation works with a budget of 5,000 M lent by the owner, interest-free and without a repayment date. That loan counts as nothing: the corporation's result is everything above or below it.

Assets	ISK	How it is valued
Master wallet, division 1 (liquid)	2,576.3 M	Balance as EVE reports it now
Reward ISK still inside the 26 active corporation projects	2,369.6 M	Sum of the rewards not yet paid out; read from EVE at 17:30
Heavy Water stock, 2,000,000 units (listed at 149.9 in Piekura)	216.0 M	At buy value, 108 ISK a unit; the sale is booked when it happens
Buyback material still on sale in Jita (Pyerite 1,725,104; Hydrocarbons 33,190)	44.6 M	At the list price; 42.6 M at Jita's highest buy
Total assets	**5,206.5 M**	
Liabilities		
Loan from the owner (the working budget)	5,000.0 M	Interest-free, perpetual, extractable when the corporation can bear it
Result: assets above the loan	**+206.5 M**	The corporation's own money

Not included, by rule: wallet division 7 (the Director division, 3,221.2 M) is the owner's characters' shared wallet, never corporation money. The structures and the fuel in them belong to the structure corporation, Gewoon voor structures (see section 3).

2. What happened since the baseline (18 October, 07:40 EVE)

Movement	ISK	Note
Buyback material sold in Jita (seven materials, gross)	+143.2 M	Zero-Point Condensate 61.0, Pyerite 44.1, Mexallon 16.6, Crystalline Isogen-10 14.0, Hydrocarbons 5.5, Silicates 2.0, Tritanium 0.0
Moon mining tax paid in by a member	+5.5 M	Ryaku711, "10% tax on moon mining"
Project rewards paid out to members	-17.4 M	The projects pot fell from 2,387 M to 2,369.6 M as members delivered
Broker fee and transaction tax on the listings	-4.5 M	Paid from division 1 when the orders went up
Heavy Water sold since the 18th	0.0 M	No units sold yet; the order stands at 149.9

The sales proceeds are already inside the liquid figure of section 1. The buyback material itself was paid for through Deliver Item projects before the baseline, so what it fetches now is new money for the corporation.

3. Running costs: structure fuel

The alliance runs three Upwell structures. Each online service module burns fuel blocks every hour; the figures below come from EVE's own item data (service module fuel need, and the structure's bonus on it). Priced at today's cheapest fuel block at Jita 4-4: Nitrogen Fuel Block, 17,890 ISK (lowest sell). A month is taken as 30 days.

Structure	Online services (blocks per hour)	Blocks / day	ISK / day	ISK / 30 days
Orlov Family Facilities (Raitaru)	Manufacturing 12 → 9 with the 25 % bonus; Research lab (copying, ME, TE) 12 → 9; Reprocessing 10 (no bonus): 28 per hour	672	12.0 M	360.7 M

Orlov Mining Facility I (Athanor, Piekura)	Moon drill 5 → 4 with the 20 % bonus	96	1.7 M	51.5 M
Orlov Mining Facility II (Athanor, Saatuban)	Moon drill 5 → 4 with the 20 % bonus	96	1.7 M	51.5 M
All structures		**864**	**15.5 M**	**463.7 M**

Fuel already in the bays (prepaid, owned by the structure corporation, at today's price): Raitaru until 21 November, about 22,600 blocks, 405 M; Athanor I until 26 December, about 6,600 blocks, 117 M; Athanor II until 11 January, about 8,100 blocks, 146 M. Together about 668 M of fuel paid for before the baseline.
The two Athanors cost 103 M a month between them. The Raitaru's three service modules are the bulk of the bill at 361 M a month; the reprocessing module alone is 129 M of that.

4. Monthly outlook

Per 30 days	ISK	Basis
Structure fuel, all three structures	-463.7 M	Section 3, at today's cheapest block
Structure income: industry job tax paid to the structure corporation	+280 M	Run-rate of the last 7 days (65.1 M), members only, owner's own jobs excluded; the ledger started 4 October (113.9 M in 14 days)
Buyback material: the orders still open	+43 M	Once Pyerite and Hydrocarbons sell, after tax
Heavy Water: the 2,000,000 units at 149.9	+84 M	Above book value, before tax, if the whole batch sells at the list price
Net, if nothing else changes	**about -57 M**	Fuel is the one cost that outruns the income; moon ore and buyback sales decide the month

Fuel is paid by the structure corporation, Gewoon voor structures, which also receives the industry job tax; the corporation's own books (section 1) carry neither. This section puts them side by side so the directors see the whole alliance.

5. Rules of these books

• The 5,000 M loan counts as zero; the result is assets minus the loan.
• Stock is carried at what it cost (Heavy Water at 108 a unit); profit is booked when it sells, net of broker fee and sales tax.
• Reward ISK still in an active project counts as corporation money until a member earns it.
• The Director division (wallet 7) is never corporation money.
• The structures, their fuel and the industry tax belong to the structure corporation and appear only in the outlook.
• Sources: EVE's ESI through auth (corporation wallets, journal, transactions, market orders, projects, structure services and item data), Fuzzwork for the Jita prices. Figures are a snapshot; the market moves.
